

HS IET Plaque
Student

Student: Kind of enjoy their job. Yeah, you can enjoy you're job, even if you're really bad at it.

Student: The coal should go here?

Student: Too many years.

Student: Or we know the client. We could interview them and ask them what they buy.

Student: Yeah.

Student: Does that sound good?

Student: Actually, no.

Student: What?

Student: We could put a little It's like a GIF. Just like, good job.

Student: So there's going to be a woman, and she should ...

Student: What could be silimar to ... a sign of being ...

Student: You mean like a logo? Like a symbol for the thing?

Student: Like a symbol, yeah. Something like that.

Student: It's this last one where we see ... You describe them.

Student: Yeah it gets signed by them.

Student: Oh. Like a sign?

Student: Maybe somewhere down here.

Student: So somewhere down here.

[00:02:00]

Student: Yeah.

Student: And then would it would be ...

Student: Whatever you come up with, it will give them an idea about how you think the others should be. Use visuals, okay? What I mean by that is they'll have a better idea of who you guys ...

Student: Do you guys want it just flat here or a little curvy?

Student: A little curvy.

Student: All right. Let me ... Yeah.

And then, just straight that one?

Student: Do it like that.

Student: Okay. It's like the bread.

Student: Don't you fuck up.

Student: For what?

Student: Oh, God. Oh my God.

Student: Do you understand me? This is one of your designs, but it must be what your company is ...

Student: Like a board?

Student: Shape of our plaque, because that's what Disney is. For our background, we're planning to put the castle, the Disney castle. Student is going to talk about our design.

[00:04:00]

Student: What we plan on putting on the plaque is Walt Disney presents, and then circle the name of the employee here, with the employee of the year award, along with the company's boss's signature. Along with some sort of quote, to in order to show what kind of hard work they did. Over here we're going to use some sort of LED lights. For example, on the background we're thinking of doing some sort of blue background with white lights to show the brightness of it. We're also going to have their mascot, Mickey Mouse, engraved into the glass with their LED lights being black, red, and yellow.

Student: Materials are glass, LED, and tools. We're going to have for the Mickey Mouse, it's going to be black wood.

Student: Our costs will be approximately \$630. The wood would be \$5, the glass would range between \$5 to \$10. The engraving part would be \$10 a minute, plus the labor, so that's \$600. The lights, the LED lights would cost \$10.

Student: That's all, thank you.

Student: Should we introduce? Okay.

Student: I'm Student.

Student: I'm Student.

Student: And I'm Student.

Student: [00:06:00] The design of this, we were planning on having the shape of the Mickey Mouse head with a wood border, but the inside was going to be made of granite or something nice, hard material that could be polished after it gets engraved. On the inside we would have Minnie over here and Mickey over here. The Disney and the employee of the year in the center.

Student: What we basically aimed for, you know the Aulani, the resort, that area. We put a shaka, like the hands. The palm trees there with the name of the employee. We put a little quote here that says, "If you can dream it, you can do it." Yeah.

Student: The resources and materials that we would use. A wooden border around, and granite covering the middle. Tools we would use is an engraver, polish, and a rag to polish it up. Estimated costs would be \$450.

Student: How long would it take you to come up with a finish time?

Student: For a good finished one? Maybe a couple days. Just to make it ... If we need any last minute adjustments, we'll have enough time.

Student: Very good.
